## INTRODUCTION TO BARNE COIN

Barnecoin is an Ethereum-based token that will allow users to make and receive payments using our platform and Ethereum smart contract technology. Barnecoin brand was created in 2018 and at the moment it's a top choice of many investors, merchants and clients in business relationship with Barnes Digital Limited.

Barnecoin is superior to traditional payments. Due to its trustless and immutable nature. Unlike non-blockchain solutions, barnecoin is built on the decentralized Ethereum network.

Blockchain implementations prevent any entity from changing user's financial information, eliminating the need for a user to trust an unknown entity with their personal assets. To reach as large of an audience as possible and introduce the need for blockchain technology to the general public.

## **VISION**

Build and operate the most professional BRN platform, with a full range of services. Establish ourselves as the leading decentralized platforms within the crypto ecosystem with inter connected liquidity pools. Discourage the use of fiat currency system by using our innovations to establish a real time crypto currency with global reach. We intend to establish an e-commerce site where buyers can directly

access companies globally. We intend to make the acceptability of our coin to be 100% by our clients globally. We also intend to encourage savings through staking.

## SECURITY & SAFETY

Barnecoin is not controlled by any organization or government. BRN uses blockchain technology and the data base is continuously recorded and shared to all servers, so all information is impossible to be tempered or cheated. If anybody would want to cheat, they must hack all the servers at the same time.

We shall introduce Two-Factor Authentication 2FA Feature which gives users a convenient solution to secure their data.

The Barnecoin platform will be provided in the form of a mobile application. This mobile application will run and be maintained by Barnes Digital Limited, however Barnecoin is built upon the Ethereum's network, users may call upon barnecoins smart contract functionality without using the mobile app.

BRN tokens work in a similar way as tokens on other exchanges but they have additional value for the users of the exchange. Owners of the tokens have the ability to participate in the company, reduce the transaction fees and give the token holders the right to receive a part of the profit made by the company.

BRN tokens are implemented based on the most popular and advanced ERC20 protocol. The base for the tokens is the Ethereum blockchain with is relatively fast compared to alternatives. Thanks to that technology we are able to implement the token for all the payments processes and all of our sites without limitations. The main goal of the token will be to provide the possibility to freely

trade and exchange tokens between users, our services and transfers between traders and other instruments. Holders of the BRN tokens will be able to trade BRN in pairs with all other currencies available on our market.

BRN token holders will have a possibility to exchange fractional part of ( $\sim < \$0,5$ ) tokens for BRN and the payment option for trusted trading commissions.

What's more, they will also have the right for immediate, unlimited and free transfers between members of our platform. Free transfers will be available between Barnecoin Exchange, Barnecoin wallets and ATM network for all token holders (members), as long as all services are performed within our internal infrastructure.

BRN token holders will have also the right to possess the so-called BRN-POWER tokens, i.e. "freezed" tokens kept in a verified wallet for a specific time.

All new listing of coins beyond the initial ones will require additional assessment. BRN-POWER holders will have the privilege to vote and decide which of the planned tokens they want. Coins of the completely new project or less known in the global markets will be added on demand in the first place in pairs to BRN. If you or your project is based on token or coins and have a problem with listing on any market this is another reason why you should get BRN-POWER.

## DISTRIBUTION OF TOKEN

Barnecoin token works with smart contracts on the Ethereum blockchain. Ethereum smart contract is to eliminate counter-party risk and allow fast, secure payments to participants.

■

# Initial Coin Offering

## 4.1 Token sale

Token sale url: <https://barnecoin.com>

Total tokens created: 1billion BRN Platform ERC20 (Ethereum Blockchain)

Total tokens available on main sale: 700m BRN

Total tokens hold by company: 200m BRN, and could be released for future development.

Pre-sale: 5%

Marketing Partners: 3%

Bounty program: 1%

There are 320 stages during the main sale period (February 15 - December 31). The stage lasts 24 hours (1 day). The price of the token increases with each stage. At each stage of the main sale, 24,018,750 tokens are available for sale. Tokens that do not sell at a certain stage will be burned. Check the chart on Barnecoin.com.

The initial proportion in % 20/80 (company/holders) should remain. In case of scenario that not all tokens are sold in that period of time, all remaining tokens are subject to burn or destroy to keep planned initial proportion. The company can repurchase tokens from the market in the future. If hard-cap or deadline is reached, the sale event will close automatically. We reserve the right to extend the sale for a further 6 months in the situation of a significant loss on the value of ETH and in case of the absence of a satisfactory sale of a token. BRN token due to its adaptable

characteristics is not limited to the main tool for exchanging FIAT and digital currencies but also as a tool that allows transfers between our users, applications, and services ordered currently and in the future by Barnes Digital Limited.

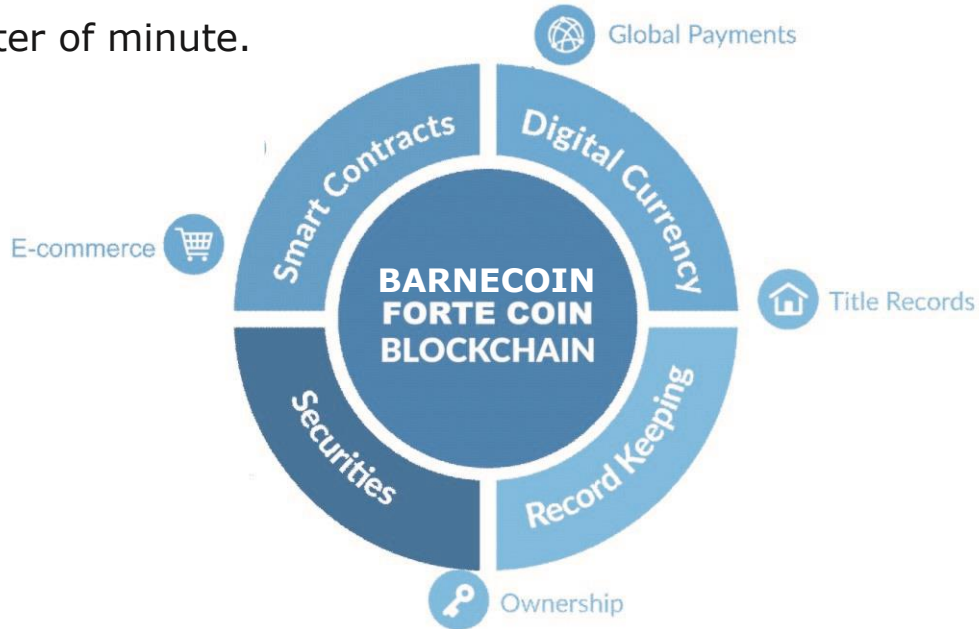

The price of BRN token changes over time during stages.

Each change is directly proportional to the progress of the barnecoin project. The project is developing and we are constantly working on new features. We believe that such arrangements are fair to investors who engage in the earlier phase of the project, because they have less awareness of the degree of project implementation.

During pre-sale BRN token price was increasing from \$0.01 to \$0.1.

During the main sale, its initial price is \$0.1 and will increase to \$0.9.

Barnecoin runs on the speed of the Ethereum blockchain, and enormous global infrastructure that can move value around the world in a matter of minute.

## TRANSPARENCY AND FAIRNESS

Investing is now not just a transfer of money but the purchase of crypto currency, which remains liquid throughout the process and can be resolved at any time. Investors have additional protection.

Profit distribution is completely transparency and open

We have about 1 billion coins, 700m coins in circulation and a reserve of 200m coins.

## Disclaimer

BRN Tokens are not viewed as securities and only represent stakes in the company's project, which once completed have certain values as determined by the larger market. Due to inaccuracies in legal regulations, the purchase of tokens is not offered to residents, citizens and people residing in the US. Any attempt to purchase for above members during crowd sale are subject to cancel of transactions and no token will be issued.

This document and any other documents published in association with this white paper relate to a potential token offering to persons (contributors) in respect of the intended development and use of the network by various participants. This document does not constitute an offer of securities or a promotion, invitation or solicitation for investment purposes.

The terms of the contribution are not intended to be a financial services

offering document or a prospectus. The token offering involves and relates to the development and use of experimental software and technologies that may not come to fruition or achieve the objectives specified in this whitepaper. The purchase of tokens represents a high risk to any contributors. Tokens do not represent equity, shares, units, royalties or rights to capital, profit or income in the network or software or in the entity that issues tokens or any other company or intellectual property associated with the network or any other public or private enterprise, corporation, foundation or other entity in any jurisdiction. The token is not therefore intended to represent a security interest. This version of the whitepaper supersedes any previous versions and any translated versions as the official BRN token whitepaper.
